

Bingo das planificações

DA FIGURA PLANA AO SÓLIDO

O desafio é prever o sólido ao dobrar cada rede, contar suas faces e descobrir quando uma planificação não fecha. As imagens de objetos só contextualizam o tema.

COMO JOGAR

1. Imprima as páginas 2 a 41; entregue uma cartela por criança ou dupla.
2. Recorte e embaralhe as 12 chamadas das páginas 42 e 43.
3. Leia apenas a pista azul. A criança procura a rede geométrica.
4. Peça uma prova: conte faces e imagine as dobras.
5. Valide linha, coluna ou diagonal com a justificativa.
6. Teste redes selecionadas com papel recortado e dobrado.

MEDIAÇÃO MATEMÁTICA

A, B, E, F, G, I, K e L fecham sólidos. C tem seis quadrados, mas a fila se sobrepõe ao dobrar. D, H e J não têm todas as faces necessárias.

Compare uma rede possível com uma impossível. Pergunte: 'Qual face vira base? Quais são as laterais? O que falta ou se sobrepõe?'

OBJETOS PARA RELACIONAR ÀS REDES

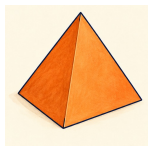

cubo

paralelepípedo

prisma triangular

pirâmide quadrangular

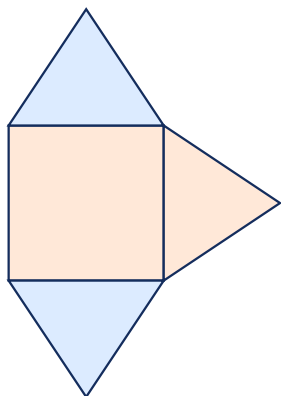

prisma hexagonal

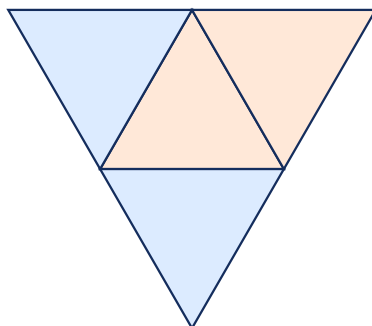

Bingo das planificações

Marque uma linha, coluna ou diagonal. Justifique sua escolha!

Cartas de chamada

Leia só a pista em azul. A resposta e a justificativa ficam com o professor.

CHAMADA 01

Seis quadrados: um central, quatro ao redor e outro preso ao quadrado de baixo. Qual rede pode fechar um cubo?

Resposta: REDE A

A rede A tem seis quadrados em cruz e é uma planificação válida do cubo.

CHAMADA 02

Seis quadrados: quatro em fila, um acima do segundo e um abaixo do terceiro. Qual rede fecha um cubo?

Resposta: REDE B

A rede B dobra em seis faces distintas do cubo.

CHAMADA 03

Seis quadrados numa única fila: há seis peças, mas elas não fecham um cubo. Qual rede mostra esse erro?

Resposta: REDE C

Uma fila reta de seis quadrados sobrepõe faces ao dobrar; não fecha o cubo.

CHAMADA 04

Uma tentativa de cubo mostra apenas cinco quadrados. Em qual rede falta uma face?

Resposta: REDE D

O cubo precisa de seis faces quadradas; a rede D tem cinco.

CHAMADA 05

Quatro retângulos laterais e duas bases quadradas: qual rede monta um prisma de base quadrada?

Resposta: REDE E

As quatro laterais e as duas bases quadradas formam um prisma quadrangular.

CHAMADA 06

Quatro retângulos laterais com larguras alternadas e duas bases retangulares: qual rede monta uma caixa?

Resposta: REDE F

As seis faces retangulares formam um paralelepípedo retângulo.

Cartas de chamada

Leia só a pista em azul. A resposta e a justificativa ficam com o professor.

CHAMADA 07

Três retângulos e dois triângulos, um em cada extremidade: qual rede fecha um prisma triangular?

Resposta: REDE G

As duas bases triangulares e três laterais retangulares fecham o prisma.

CHAMADA 08

Três retângulos e apenas um triângulo: qual tentativa de prisma triangular fica sem uma base?

Resposta: REDE H

Falta o segundo triângulo para fechar o prisma triangular.

CHAMADA 09

Um quadrado central e quatro triângulos ao redor: qual rede monta uma pirâmide quadrangular?

Resposta: REDE I

O quadrado é a base; os quatro triângulos são as faces laterais.

CHAMADA 10

Um quadrado e só três triângulos: qual tentativa de pirâmide quadrangular perde uma lateral?

Resposta: REDE J

Uma pirâmide quadrangular precisa de quatro faces triangulares laterais.

CHAMADA 11

Um triângulo central e outros três presos a seus lados: qual rede fecha uma pirâmide triangular?

Resposta: REDE K

Os quatro triângulos formam as quatro faces da pirâmide triangular.

CHAMADA 12

Seis retângulos laterais em fila e duas bases hexagonais: qual rede fecha um prisma hexagonal?

Resposta: REDE L

Os seis retângulos e as duas bases hexagonais fecham um prisma hexagonal.
